

Remediation or Review Packet Test 12 Geometry(1-4) Probability (5-8)	Name _____ Review:(9-)
<p>1. If the measure of arch DAB is 290, find the measure of the following.</p>  <p> $m\angle A =$ $m\angle BCD =$ $m\angle E =$ </p>	<p>2. If the measure of $\angle F$ is 25 degrees find the following:</p>  <p> $m\angle ACD =$ $m\angle B =$ </p>
<p>3. Graph the following and then find the 4th vertices to make it a parallelogram. $(-2,4)(-1,0)(4,5)$ (,)</p> <p>Katie thinks this parallelogram is also a rectangle. She is incorrect. How do you know?</p> <p>What is the perimeter of the parallelogram?</p> <p>Where do the diagonals cross?</p>	
<p>4. If A = set of numbers from 1-50 that are multiples of 5 and B = set of numbers from 1 - 50 that are multiples of 4,</p> 	<p>Find $A \cup B$</p> <p>Find $A \cap B$</p>
<p>5. Complete the tree diagram, and then answer the questions. You draw a marble out of a box, and then</p>	<p>6. You are curious what color shirt the girls and boys will like more that you are selling. Here is the data you collected.</p>

without replacing you draw out another one.
The box contains 7 blue marbles and 3 yellow marbles.

What is the probability of not getting a blue marble?

What is the probability getting the same color marble?

What is $P(\text{Yellow} | \text{Yellow})$

	Blue	Red	White	
Girl	18		57	
Boy		49	36	
	27	63		

What is the probability of a person in the survey liking the Blue shirt given it is a boy?

What is the probability of a person in the survey being a girl given they like the White Shirt?

A jar contains 4 chocolate chip cookies, 3 sugar cookies, and 2 oatmeal raisin cookies. Annie picks a cookie from the jar at random. She puts the cookie back in the jar and picks another one.

What is the probability that Annie picks a chocolate chip cookie the first time and a sugar cookie from the jar the second time?

- (A) $\frac{8}{81}$
- (B) $\frac{4}{27}$
- (C) $\frac{1}{2}$
- (D) $\frac{7}{9}$

7.

Paola has a bag that contains 1 green marble, 1 red marble, 1 blue marble, 1 pink marble, and 2 purple marbles. She takes out three marbles, one at a time, without replacing any of them.

What is the probability that two of the marbles drawn consecutively will be red then blue?

- (A) $\frac{1}{30}$
- (B) $\frac{1}{15}$
- (C) $\frac{1}{10}$
- (D) $\frac{1}{5}$

8.

9. Solve the equation: $3x^2 - 27x + 100 = 6x + 10$

10. Find ED.
If AE = 40, find AC.

11.

Select all the expressions that are equivalent to

$$4^{\frac{3}{2}}$$

A $(4^2)^{\frac{1}{3}}$	B $(4^{\frac{1}{2}})^3$	C $\sqrt[3]{4^2}$
D $(\sqrt[3]{4})^2$	E 8	F $\sqrt{4^3}$
G $(4^3)^{\frac{1}{2}}$	H $(\sqrt{4})^3$	I $(4^{\frac{1}{3}})^2$

12.

The following is a ball launched off a platform (sec,ft). Choose all the correct interpretations of the graph:

- A) The ball hits the ground at 3.6 seconds.
- B) The ball reaches a maximum height of 106 ft.
- C) The Ball has an initial velocity of 16 ft/sec.
- D) The Range for this situation is [2,106]
- E) The acceleration of the object is -16 m/sec².
- F) The ball is launched from a platform 90 ft high.
- G) The object is in the air for 3.2 seconds.
- H) The object reaches its maximum height at 2 minutes.
- I) The time to get to the max is 1 second.
- J) The Domain of this situation is [0,3.6]

13.

Xavier cannot walk from point A to point B because there is a pond in the way. Instead, he starts by walking at an angle of 30° from the direct path, then makes a 90° turn, and finally walks 40 feet to reach his destination.

If Xavier were able to take a direct path, how far would he walk?

- (A) 20 feet
- (B) $40\sqrt{2}$ feet
- (C) $40\sqrt{3}$ feet
- (D) 80 feet

14. Write the equations for the below piecewise graph.
